

# LONG ACTING INJECTABLE ANTIPSYCHOTICS

Approximately **60%** of people with psychotic disorders **do not adhere** to their prescribed medication due to poor insight, disorganization and other factors.

**Non-adherence** is a **major preventable cause of relapse** and associated hospitalizations by people with psychotic disorders.

## LAI...

Allow you to know with certainty the adherence status of your patients. This greatly enhances clinical decision-making.

Take the burden off patients.

Eliminate the frequent problem with oral medication of patients mistakenly taking an incorrect number of pills or incorrect dose strengths.
