2:50-2:55pm: Closing Remarks

2:55pm: Call Concludes

PROGRAMMING

City of New York, NY – Science Advisory Group

- **Description:** To inform our approach to measuring the population-level impact of ThriveNYC, we have assembled a Science Advisory Group, comprised of national and international experts in the epidemiology, treatment, care and social drivers of mental health. On this call, we will discuss our process for identifying members and collaborating with the Science Advisory Group, and key themes that have emerged from our work together.
- **Presenter:** Wendy Elaine Viola, Director of Research

County of St. Louis, MO – Mental Health Dashboard

- **Description:** Over the past few years, agencies and organizations across the St. Louis region (City of St. Louis and St. Louis County) have pursued initiatives to address mental health outcomes among residents. These efforts highlighted an important gap: there was a lack of standardized data on health outcomes across the region. Therefore, as part of the efforts to address mental health, with support from the System of Care, the St. Louis County Department of Public Health established a dashboard to provide a regional platform for sharing data on mental health. This platform provides data for various mental health indicators across the region.
- **Presenter:** Echo Wang, Mental Health Epidemiologist, Division of Health Promotion and Public Health Research, Saint Louis County Department of Public Health
