# Strategies to Leverage Perinatal Health Equity

---

**Studies indicate that understanding trends in opiate and substance use during pregnancy and related challenges plays a pivotal role in being able to provide the needed continuum of care for families and individuals.**

From supporting families experiencing substance use disorders, serious mental illness, and other health and social needs, speakers throughout the series shared how integrated care can address the unique needs of pregnant and post-partum people through innovative partnerships, de-stigmatizing and supportive environments, and person-centered care.
