Background & objectives

- This research was designed to understand current experiences of those working in mental health and substance use disorder settings including current workloads, challenges, satisfaction, and future outlook. The findings will be used to inform and support NCMWB’s advocacy efforts and help to develop more effective solutions.

- Specifically, the research:
  - Explored current work environment including hours works, and workload issues
  - Evaluated importance and satisfaction with various aspects of work environment
  - Explored future career outlooks, such as likelihood to stay in the professional and rationale for why/why not
  - Assessed the supports needed to help mental health and SUD workers better serve their clients and draw future workers to the industry
  - Quantify the impacts - current and potential - of the workforce shortage of the industry and society

- In light of workforce shortages, the research also evaluated perceptions of the industry, among a general public audience.
Throughout the report mental health and SUD employee data are presented in orange and general population data will always be displayed in blue. Markers are included on the top right corner of slides to indicate when general population data are displayed on that slide.

Some of the slides include data with a small base size (n<100), we have marked these specifically throughout. We recommend reviewing these results directionally.

Responses may not add up to 100% due to computer rounding or the acceptance of multiple responses.

An asterisk (*) denotes a value less than one percent but greater than zero. A dash (-) denotes a value of zero.

The following abbreviations are used throughout the:
- Behavioral health (BH)
- Mental health (MH)
- Substance use disorder (SUD)
Method overview

Mental Health and SUD Workers
- Fieldwork Dates: February 3 – 19, 2023
- Total Sample: 750 mental health and SUD employees
  - US adults Age 18+
  - Employed full or part time
  - Work in health care or social assistance, specifically in mental health or SUD
- Survey Length: 15-Minute Survey

General Population
- Fieldwork Dates: February 7 – 9, 2023
- Total Sample: 2,080 US adult Age 18+
- Survey Length: 6 Question Survey
### Mental health and SUD worker profile

#### Current Occupation
- **Clinical**: 51%
- **Supportive Services**: 25%
- **Administrative**: 20%

*Other position 4%*

#### Years in Field (mean)
- **Clinical**: 11 yrs
- **Supportive Services**: 6 yrs
- **Administrative**: 6 yrs

#### Urbanicity of Work Environment
- **Urban**: 50%
- **Suburban**: 38%
- **Rural**: 12%

#### Current Work Environment(s)
- **Outpatient MH and SUD**: 29%
- **Multi-setting MH and SUD**: 28%
- **Community MH and SUD**: 26%
- **General hospital**: 22%
- **Residential treatment**: 13%
- **Psychiatric hospital**: 12%
- **Private practice**: 12%
- **Community**: 12%
- **In-home**: 10%
- **Detox/Rehab/MAT**: 8%
- **Nursing home/assisted living**: 8%

#### Health Care Industry
- **Mental health and SUD care (i.e., behavioral health)**: 55%
- **Integrated physical health and mental health and SUD care**: 45%
Executive Summary and Implications
Executive summary

Concerns of societal impact and lack of access along with the longevity of the mental health and SUD industry may be amplified by current workforce shortages. In addition, workforce shortages are causing added problems resulting in openness to looking for employment elsewhere.

- More than 4 in 5 employees (83%) worry that workforce shortages in MH and SUD industry will negatively impact society as a whole
  - And many (60%) have been kept up at night thinking about those who are not able to access the care they need
- Around three quarters (76%), also fear the number of lives that will be lost due to the lack of access caused by workforce shortages
- A strong majority (90%) are concerned about the ability for those not currently receiving MH and SUD care to gain access to it
  - And 83% are concerned about enough new workers entering the MH and SUD industry
- Nearly half (48%) agree that the impacts of the workforce shortage have caused them to consider other employment options - and a similar proportion (49%) report they don’t want to leave the industry, but often feel like they may have no other choice

Employees highlight the need for policy changes to meet current demands and many are willing to help.

- More than 4 in 5 (83%) think without any policy changes, it will not be possible for providers to meet the demand of the industry
- More than two-thirds (68%) believe they will be able to influence change in the system to address the workforce crisis
- And 82% are concerned about adequate reimbursement rates
Executive summary

Mental health and SUD industry employees have been affected by workforce shortages in a variety of ways – commonly in the form of increased caseloads and administrative burdens

- Around a third (31%) are seeing more than their ideal number of clients on a weekly basis
  - And nearly 3 in 5 (58%) say their waitlist is longer than ever
- COVID has increased client severity (72%) and caseloads (65%) for many workers
- More than two-thirds report the time they spend on administrative tasks takes away from time that could be spent on direct client care
- A third of workers (33%) are spending a majority of their time on administrative tasks and a similar proportion say they are not able to manage these demands without working extra hours (43%)
- Nearly half (47%) say most of the administrative work they do feels unnecessary

Despite the challenges mental health and SUD employees face, many feel passionate and fulfilled by the work they do – however, many are experiencing ramifications on their personal lives

- Nearly all employees are satisfied with their ability to make a difference for their clients (96%) and help others (95%) at their current job
- And the passion for working in the industry is unwavering for a majority (92%)
- However, 62% have moderate or severe levels of burnout and 4 in 5 (80%) report work has had some negative impact on their life- including their mental health (37%)
Implications

Mental health and SUD industry challenges impact both its current and future workers – and to a larger extent society. There are concerns for the lack of access to care and the number of lives that could be lost as a result, so it is imperative that the field maintains, or even increases, its workforce. However, shortages are causing issues for the industry, individual practices/clinics, and employees. Increased caseloads and client severity, administrative demands, and personal mental demand are weighing heavily on mental health and SUD employees – some of which are among the reasons current employees would not recommend the field. Some employees are even looking to other areas and fields for employment, which could cause further shortages for the field – and ultimately greater impact on society. This difficult cycle highlights the need for immediate action.

While the data suggests urgent policy changes are needed, those in the field may also serve as a useful step towards alleviating shortages and even highlighting the need for policy makers to take action. As many employees feel they can influence change, it may be worth utilizing the voices and firsthand recounting of employees’ experiences, needs, and challenges to help emphasize the urgency.
Implications

Meanwhile, it may be useful to amplify and/or maintain current actions/policies to help reduce challenges employees face. Increasing partnerships with other systems (e.g., schools, physical health care providers, and hospitals), ensuring permanent access to telehealth, and having greater collaboration at federal and state levels are among the actions the industry took during the COVID-19 pandemic – actions which mental health and SUD employees feel should be continued to promote better access to care.

In addition, looking within the industry for more immediate relief may be an option. Many in the industry say they are likely to recommend the field and feel fulfilled by the work they do. By speaking to the public and potential future employees about their work and passion, they have the ability to highlight the advantages to a career in the field – ultimately, drawing in future workers, which has the potential to further help to reduce workforce shortages and ensure the longevity of the field.

The mental health and SUD industry is in a difficult place – caught in the middle of high demands, workforce shortages and an uncertain future. Our society is urgently in need of solutions – solutions which could affect change for us all. And while there are steps the industry can take to alleviate certain problems, problems, policy solutions are urgently needed. The gravity of the challenges the mental health and SUD industry faces cannot be taken lightly and requires swift and impactful action.
Overarching Key Findings
Policy changes viewed as necessary to meet the demands for mental health and SUD care

And nearly 7 in 10 feel they will be able to influence change in the system to help address the workforce crisis.

“Without any policy changes, it will not be possible for providers to meet the demand for mental health and substance use disorder care.”

% Agree strongly: 36%
% Agree somewhat: 46%
